

Tasks: Operating System (os) modules using automation:

1. Create a python function `create_folder_structure(project_path)` **that creates the project folder named** `First_Automation_Project` **and having the following structure:**

```
First_Automation_Project/  
  |__Code/  
    |__ app.py  
    |__ services.py  
    |__ login.py  
    |__ register.py  
  |__Images/  
  |__API/  
    |__routes/  
    |__main.py  
  |__public/
```

Note: Run the file and execute the `create_folder_structure(project_path)` **in the** `main()` **function in python. Do not use any AI resources, do it by yourself.**
