

First create a new app

```
python manage.py startapp [app_name] # myapp
```

Register the app in settings.py

Add name of created app `INSTALLED_APPS` list present in `settings.py` file

```
INSTALLED_APPS = [  
    'django.contrib.admin',  
    'django.contrib.auth',  
    'django.contrib.contenttypes',  
    'django.contrib.sessions',  
    'django.contrib.messages',  
    'django.contrib.staticfiles',  
    # ... above are default apps  
  
    # ... below one is custom app  
    'myapp',  
]
```

Write your model in app/models.py file

```
from django.db import models  
  
# Create your models here.  
class Person(models.Model):  
    first_name = models.CharField()  
    last_name = models.CharField(max_length=10)
```

Write/Generate and Apply Migrations

```
python manage.py makemigrations
```

```
python manage.py migrate
```

Register model as site in myapp/admin.py file

```
from django.contrib import admin
from myapp.models import Person

# Register your models here.
admin.site.register(Person)
```

For representation in admin use `__str__` method

```
from django.db import models

# Create your models here.
class Person(models.Model):
    first_name = models.CharField()
    last_name = models.CharField(max_length=10)

    def __str__(self):
        return self.first_name + " " + self.last_name
```
