

□ Week 1 — Hello Python

Week Overview

Week 1 is your entry point into Python. You will write your very first Python program, understand what an interpreted language is, learn how to display output, and get comfortable with the tools every Python programmer uses every day.

By the end of this week, you won't just know *that* Python works — you'll understand *how* it works, and why it's one of the most popular programming languages on Earth.

□ Learning Objectives

By the end of Week 1, you will be able to:

- ☐ Open and use the Python interactive shell (REPL)
 - ☐ Create, save, and run a Python script file (.py)
 - ☐ Use `print()` to display text, numbers, and booleans
 - ☐ Control `print()` behavior using `sep` and `end` parameters
 - ☐ Write single-line and inline comments using `#`
 - ☐ Explain the difference between interpreted and compiled languages
 - ☐ Describe what the REPL is and when to use it
-

Topics Covered

Lab File	Topic
Lab_1_1_First_Program.md	The Python REPL, writing script files, running programs
Lab_1_2_Understanding_Print.md	Deep dive into <code>print()</code> — separators, endings, data types
Practice_Problems.md	3 practice problems + challenge extension
Solutions.md	Solutions with explanations
Challenge_Lab.md	ASCII Art Printer challenge
Revision_Sheet.md	Cheat sheet, MCQs, True/False, interview questions

□ Prerequisites

- Python 3.8 or higher installed on your machine
 - A code editor (VS Code recommended) or IDLE
 - Access to a terminal (Command Prompt / Terminal)
 - **No prior programming experience needed**
-

🕒 Estimated Study Time

Activity	Time
Lab 1.1 — First Python Program	30–45 minutes
Lab 1.2 — Understanding print()	20–30 minutes
Practice Problems	30–45 minutes
Challenge Lab	20–30 minutes
Revision Sheet	15–20 minutes
Total	~2 hours

□ File Structure

```
Week_1/
├── README.md           ← Start here (this file)
├── Lab_1_1_First_Program.md ← The REPL, script files
├── Lab_1_2_Understanding_Print.md ← print() deep dive
├── Practice_Problems.md ← 3 exercises (no solutions here)
├── Solutions.md        ← Solutions with explanations
├── Challenge_Lab.md    ← ASCII Art challenge
└── Revision_Sheet.md   ← Cheat sheet + quizzes
```

□ Recommended Order

1. README.md → 2. Lab_1_1_First_Program.md → 3. Lab_1_2_Understanding_Print.md → 4. Practice_Problems.md → 5. Solutions.md → 6. Challenge_Lab.md → 7. Revision_Sheet.md
-

□ Learning Outcomes

After completing Week 1, you will have:

- Written and executed your first Python program
- Used the REPL for interactive Python experiments

- Created a `.py` script file and run it from the terminal
 - Mastered the `print()` function and all its parameters
 - Written meaningful code comments
-

☐ Quick Checklist

Before moving to Week 2, confirm you can do all of the following **from memory**:

- ☐ Launch the Python REPL from the terminal
 - ☐ Exit the REPL with `exit()`
 - ☐ Create and run a `.py` file
 - ☐ Use `print()` with multiple arguments
 - ☐ Use `sep=` and `end=` in `print()`
 - ☐ Write a comment using `#`
 - ☐ Explain what "interpreted" means
-

☐ Study Tips for Week 1

- **Do not skip the REPL section.** The interactive shell is your fastest learning tool throughout this course.
 - **Type every code example.** Don't copy-paste — your fingers need to learn the syntax too.
 - **Experiment freely.** Change values in the examples. What happens if you put a number inside quotes? Try it.
 - **Read error messages.** When Python gives you an error, it's telling you exactly what went wrong. Learn to read them.
-
